

COCCIN

Enriched with Cinnamon, Oregano and Capsicum

**Natural way to prevent and control
Intestinal & Caecal Coccidiosis**

COCCIN

Enriched with Cinnamon, Oregano and Capsicum

Natural way to prevent and control Intestinal & Caecal Coccidiosis

Coccin keeps coccidia under control and promotes growth and better utilization of nutrients. Herbal constituents of **Coccin** suppress the growth and development of coccidia through their reaction with cholesterol in protozoal membrane by forming irreversible complex causing breakdown of the membrane as well as lyses and death of protozoal cells. **Coccin** constituents also reduce the reproductive potential of coccidia, thus control oocyst production and check recontamination.

Unlike synthetic anticoccidials that act on a certain specific stage of coccidial life cycle, the active constituents of **Coccin** synergistically act on different stages of endogenous development for complete control of coccidia. **Coccin** does not interfere with the development of natural immunity against coccidian protozoa. Unlike synthetic anticoccidials, **Coccin** is free from the side effects and toxicity associated with chemical anticoccidial supplements as well as from the problem of resistance development.

Coccin has been shown to reduce faecal score, lesion score, oocyst output and mortality and improve weight gain, FCR and production performance of the birds. **Coccin** also helps to suppress pathogenic bacteria, stimulate the immune system and increase resistance to disease challenge. Thus **Coccin** exhibits positive growth promoting effect in broilers, layer chicks and growers.

Water Inclusion Rate (per 100 Birds):

Prevention

7.5ml/100kg body weight for 7-10 days

1ml/2.5L drinking water for 7-10 days

Control

20ml/100kg body weight for 7-10 days

1ml/Lit drinking water for 7-10 days

Presentation:

1 Lit bottle, 5 Lit jar
